Canon

imageRUNNER™ 5000/6000 Series

THE DEPARTMENTAL NETWORKED OFFICE SYSTEM OFFERING SUPERIOR DOCUMENT WORKFLOW PERFORMANCE.

Introducing the imageRUNNER 5000/6000 Networked Office System. Designed to leverage the power of customer networks to streamline information management.

In today's business environment, time is of essence. To maintain the highest levels of productivity, organisations must do more with less, while streamlining information workflow.

Building on the benchmark reputation of previous Canon digital product offerings, the imageRUNNER 5000/6000 delivers a fast 50/60-page-per-minute print and scan speed, while at the same time delivering the highest image quality, network integration, and finishing capabilities of any product in its class.

Designed specifically for the needs of large workgroups and corporate departments, the imageRUNNER 5000/6000 is ideally suited for the replacement of existing analog copier technology, and for the delivery of robust

printing and scanning capabilities not typically accessible in today's office environment. So when you're looking to drive greater levels of productivity and information management, look no further than the imageRUNNER 5000/6000 to handle the job.

Whether you're printing, or scanning, the imageRUNNER 5000/6000 simplifies job operation and comes equipped with all the tools necessary to be your best.

A Treasure Chest of Functionality

The imageRUNNER 5000/6000 builds upon Canon's digital product platform, offering traditional and new capabilities to corporate workgroups and departments. With the ability to support network printing and both local and network scanning, the imageRUNNER 5000/6000 delivers users access to information-management capabilities regardless of whether that information resides in digital form or on paper. The power of Canon's capabilities lay in our seamless integration to customer networks, and the ability for users to easily leverage system capabilities directly from their desktops.

Extensive Configuration Flexibility

The imageRUNNER 5000/6000 offers considerable configuration flexibility, enabling customers to build systems ideally suited to individual department needs. To simplify customer choices, Canon offers the imageRUNNER 5000/6000 in two basic configurations. The imageRUNNER 5000/6000 is fully upgradable to support network printing and network scanning. Both units offer an extensive array of paper-handling and finishing options to choose from, ensuring customers have the tools to neccessary to handle the job.

The Need for Speed

Today's business environment requires that short deadlines be met. The imageRUNNER 5000/6000 is up to the task. With a 100-sheet high-capacity document feeder and automatic trayless duplexing, the imageRUNNER 5000/6000 accelerates the completion of any print, or scan job driving significant document throughput, ensuring that the only bottleneck in the system is how fast you can make it to pick up your finished work.

Image Quality an Artist Can Appreciate

Expanding upon Canon's world-class leadership in image quality, the imageRUNNER 5000/6000 captures the highest level of detail in every document. Whether you're printing, or scanning, the imageRUNNER 5000/6000 captures images at 600 x 600 dpi resolution, and is able to deliver print output at an astounding 2400 x 600 dpi resolution. When combined with its ability to support up to 256 shades of gray, you'll find yourself asking, "Is this the orignal?"

Why Stop When You Can Run The Distance Tired of stopping in the middle of your job to reload paper? With the imageRUNNER 5000/6000, you can forget about it. Shipping with a 4,150-sheet paper capacity, the imageRUNNER 5000/6000 is pre-configured to handle most busy departments. That's not enough paper you say? Well, for paper-intensive environments, the imageRUNNER 5000/6000 can also be equipped with an additional 3,500-sheet paper deck, bringing total capacity to 7,650 sheets.

Have specialised paper requirements? Not a problem for the imageRUNNER 5000/6000. With the ability to handle sizes from A6 to A3, and weights up to 200g/m², the imageRUNNER 5000/6000 is capable of handling even the most specialised printing requirements.

information management. The vast majority of the imageRUNNER 5000/6000's unique application capabilities are delivered via an internal 5.1GB Image Server and 128MB of RAM, which ship standard with every unit. Examples of this functionality include:

imageRUNNER 5000/6000 supports the creation of up to 100 indivdual user mailboxes. Mailboxes can be used to accept scanned and printed data, permitting users to easily combine paper

Permits the building of jobs

We Finish What We Start

Need to create booklets? With the imageRUNNER 5000, the creation of The imageRUNNER 5000/6000 Saddle Finisher-F2 offers three trays, two dedicated for stapled output, with the third dedicated to saddle-stitched booklets. Offering a total output capacity of 2,300 sheets (2,000 in top trays, 300 in saddle-stitch tray), the Saddle Finisher-F2 offers the same capabilites as the Finisher-F1.

For even greater levels of finishing, Canon offers an optional hole-punching unit for both imageRUNNER 5000/6000 finishers. With the ability to deliver 2-hole punched output, the imageRUNNER 5000/6000 is one of the few systems capable of punching A3, A4, A4R, B4, B5, B5R

Network Printing and Connectivity Should Not be an Afterthought

Why Stand Alone When You Can Connect

At Canon, network connectivity and printing are never an afterthought. That's why since we invented digital multifunction in 1994, we are the only vendor to deliver network connectivity and printing at the time of an initial product launch. So while other vendors are making promises about their networked capabilities, Canon is delivering them.

The imageRUNNER 5000/6000 carries on Canon's networking traditon, by not only offering network connectivity and printing capabilities at the time of initial product delivery, but by also offering customers the option of purchasing the imageRUNNER 5000N/6000N, a pre-configured model supporting network printing, and scanning.

The Ideal Departmental Solution

The imageRUNNER 5000/6000 is ideally suited to handle the printing requirements of large workgroups and small departments. With a print controller capable of handling 10/100 Ethernet or Token Ring connections, and PostScript® 3 Emulation, PCL® 5e and PCL® 6 print languages, the imageRUNNER 5000/6000 network print function is clearly up to the task.

Canon's latest print controller design leverages the unit's internal Image Server and memory structure, ensuring rapid first-page-out times, and quick and efficient printing of typical office documents. Through Canon's print controller design, customers are assured the delivery of output at rated print engine speed for optimal productivity.

A Driver that Actually Dosen't Need Directions

Why does Canon provide more network-printing capable systems than our competition? The answer is simple. We've made network printing easy. The imageRUNNER 5000/6000's clear advantage lies in the intuitive print driver software shipped with all network-print-configured units.

Using Canon's print driver software, users have immediate access to virtually every imageRUNNER 5000/6000 output function directly from their desktop in a graphical, easy-to-use format. Canon's driver software dynamically displays an image of the target imageRUNNER 5000/6000, indicating installed hardware options, paper size, and paper levels. As these attributes change, the driver is dynamically updated, automatically informing users of the latest device capabilities.

Other significant driver capabilities include the ability to save frequently-used print configurations, to annotate documents with information including name, date, etc., the ability to add watermarks, and extensive settings related to document finishing, particularly booklet-making. Through this design, Canon has created interface technology that is not intimidating for the novice user, while at the same time is robust enough to handle the demands of the power user.

And we haven't forgotten the network administrator! Canon offers multiple installation methods for the imageRUNNER 5000/6000 print driver, and ships the only available driver software capable of discovering devices on the network. This allows administrators to select imgaeRUNNER 5000/6000 target devices, and automatically configure their equipped options with just the click of the mouse.

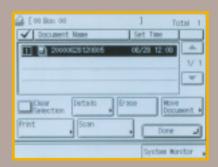

Bridging the Paper and Digital Worlds

It is estimated that the majority of corporate information still resides on paper. However, most new information is created electronically. The imageRUNNER 5000/6000, through its scanning capabilities, permits easy integration of both hard copy and electronic information, thus streamlining information availability and management. Using the imageRUNNER 5000/6000, users can scan locally to the imageRUNNER 5000/6000 internal Mailbox, or over the network (network print option is required) using Canon's virtual TWAIN driver. Through these scanning capabilities, the imageRUNNER 5000/6000 permits easy conversion of paper-based originals, such as photos and forms, for local storage within individual imageRUNNER 5000/6000 user mailboxes. At the same time, customers can leverage any TWAIN-compliant software application to drive the imageRUNNER 5000/6000 for specific network scanning and workflow requirements.

An All-star Player Sporting all the Tools

The imageRUNNER 5000/6000, like all Canon networked systems, comes equipped with a comprehensive set of system utilities designed to simplify operation and management for both endusers and network administrators. Through these tools, Canon eases device installation and network management while supplying a level of device status and job-management capabilities unmatched in the industry.

You Need to do More than Just Connect to the Network

Basic network connectivity is just that -basic. To truly support customer requirements, networked devices must be easy to install, seamlessly integrate with existing network-management applications, and permit management from anywhere in the enterprise. Canon's comprehensive solution to these customer requirements is embodied within Canon's Netspot Suite. Canon's Netspot Suite consists of three utilities outlined below:

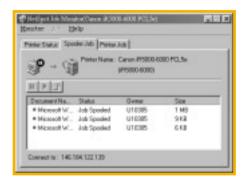

NetSpot Console: NetSpot Console is a web-based installation and management utility capable of installing and managing Canon networked systems, including the imageRUNNER 5000/6000, on most customer networks. Through NetSpot Console, network administrators are provided a convenient, platform-independent utility to install and manage Canon devices from anywhere within the enterprise. In addition to basic installation support, NetSpot Console also delivers administrator alerts, notifying administrators of device status conditions such as low toner, paper jams, and others.

NetSpot Job Monitor: To track the progress and manage print jobs, Canon supplies NetSpot Job Monitor. Using this utility, end-users can track the progress of jobs sent for printing. NetSpot job Monitor runs as an automated task in the Windows[®] System Tray, and can be configured to report job conditions based upon administrator or end-user preferences. Significant to NetSpot Job Manager is its ability to deliver end-of-job notification to end-users, ensuring that they are always informed of the completion of submitted work.

NetSpot Accountant: NetSpot Accountant is an optional utility for the imageRUNNER 5000/6000 that is capable of providing comprehensive job tracking and analysis for cost-accountiing and workflow optimization. Using NetSpot Accountant, network administrators can track all activity at the imageRUNNER 5000/6000 including copying, printing and scanning, and billing internal or external clients for device utilization. A wide range of configuration settings are available for NetSpot Accountant, enabling administrators to track device usage in a myriad of ways.

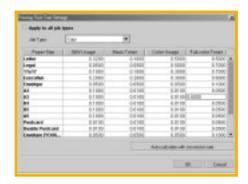

Enterprise-management Integration: In addition to the NetSpot utilities mentioned above, Canon also supplies plug-in modules for the most popular enterprise-management applications in use today. Included in this list of supported applications are Microsoft Management Console, CA-UniCenter, HP OpenView, TIVOLI TME, and BMC Patrol[®]. Through these plug-ins, Canon permits easy management of imageRUNNER 5000/6000, and other Canon networked devices, from directly within the enterprise-management system console.
